

PRACTICE POINTS

Our Newsletter

Due to popular (0.83%) demand, here is our first newsletter. We hope that you find it useful.

Our Web Site

Please note that there is a wealth of information about TheP, which can be found at www.thepractitioner.com.au. This site also allows you to download the latest documentation, and to be notified of any recent changes or versions.

Our iDisk

The "Public" folder of our iDisk has the latest versions of our product. Clients on broadband communication may download from there if they wish. Please observe the "Update" pdf which came on your original installation CD.

Our Product

Power Features -
Do you use them?

- 1• By using the web services of www.net2mobile.com.au and the SMS feature in TheP, you may automatically contact your clients via the SMS buttons. The more SMS units you purchase, the lesser the per unit cost, averaging about 13c. This service also gives you extensive usage reports, to aid in your practice management.
- 2• By establishing a merchant facility with your bank, you may use the VirtualPOS feature of TheP to submit manual credit payments via the net, and have them credited to your account. TheP allows you to securely store all client credit card details.
- 3• If you are processing tax (GST) entries in batch - after a tax ending period - you may select such entries and apply a tax ending date via the >Process -> Apply TAXpe< menu item. This can also be useful to fix any erroneous tax entries.
- 4• If you have a modem connected, clicking the phone, fax, mobile buttons will action TheP to dial that number for you.
- 5• Place an alias of your mail application and your web browser into the TheP's "Aliases" folder... name them EA and WB. Clicking the "Email" and "Web" buttons in the package, then allows you to paste the appropriate details.

Mac OSX

Sites unfamiliar with Apple's Mac OSX should note that moving documents and folders is a little trickier these days. To move a folder of items, use "Copy" and "Paste"... lest you place an alias at your destination.

Intel core-duo Macs. The current version of our product will run under "Rosetta" and has been benchmarked to be 42% faster at processing and 50% faster at sorting. Scrolling and other video functions are about equal.

Spell checking in the word-processing feature is no longer functional due to Microsoft DLL issues.

Remember >System Preferences -> Print&Fax -> Faxing<, allows you to send and receive faxes and have them redirected to alternate destinations.

Intel core-duo Macs with the "Parallels" product, will allow you to run Mac OSX, simultaneously with any number of the following guest OSs... Linux, Windows 95/98/NT/ME/2000/XP/2003, Solaris, OS/2, and eComStation

- Go Apple ! -

Our Product

New Features Under Development

- 1• Most problems with TheP are generally related to the indexing, and the numerous indices that are stored in the database.

We are currently creating a special version of the package structure which strips all the indexes out of your data, thereby necessitating a complete regeneration of the indexes and so removing any offending issues.

Seen recently in Las Vegas...
Although they were moving, I think
they marched a bit off their course !

And if you can't contact us...
This is where we will be !

Until the next issue...
